6: Wied-Neuwied T-5 (1832-1834) 1843 NQ17 Mandan NQ17

some slight differences, the mode of building resembles, in the main, those of the Mandans, Manitaries, and Arikkaras. Among these differences are the mats which are fastened all round in the first hut, and which I did not observe among the tribes that I visited. The beds, too, are arranged in a different manner. The Mandans and Manitaries are seen in their huts, sitting round the fire, employed in all kinds of domestic labour. The man has, generally, no clothing except the nokka, and is often merely smoking, but the women are never idle. In winter, that is, at the beginning or middle of November, these Indians remove, with the greater part of their effects, to the neighbouring forest, where their winter huts are situated. These consist of precisely similar huts, of rather smaller dimensions. Their departure from the summer huts is determined by the weather, but, as beforesaid, is generally about the middle of November; and their return, in the spring, is usually about the latter end of February, or the beginning of March, so that we may reckon that they pass above eight months in their summer quarters. Inside of the winter huts is a particular compartment, where the horses are put in the evening, and fed with maize. In the daytime they are driven into the prairie, and feed in the bushes, on the bark of poplars. There are, probably, above 300 horses in the two Mandan villages; some of the people, indeed, do not possess any, while others, again, have several. The Mandans and Manitaries, like all the other Indians of this country, sometimes make what are here called caches, or hiding-places, in the vicinity of their villages. These caches are holes, or magazines, underground, often so artfully contrived that it is very difficult to discover them. The Indians frequently go from their winter to their summer village, to fetch any articles they may happen to want, as they invariably leave part of their property behind. When they quit their huts for a longer period than usual, they load their dogs with the baggage, which is drawn in small sledges, made of a couple of thin, narrow boards, nine or ten feet in length, fastened together with leather straps, and with four cross-pieces, by way of giving them firmness. Leather straps are attached in front, and drawn either by men or dogs. The load is fastened to the sledge by straps (for such a sledge drawn by dogs see Vignette XXIX). When the snow is deep, they use snow shoes (Plate XXI. Fig. 4), which are described by Captain Franklin, only those of the Mandans are much smaller, about two feet and a half long; whereas in the north their length is from four to six feet. The Mandans and Manitaries have not, by any means, so many dogs as the Assiniboins, Crows, and Blackfeet. They are rarely of the true wolf's colour, but generally black, or white, or else spotted with black and white. Among the nations further to the north-west they more nearly resemble the wolf, but here they are more like the prairie wolf (*Canis latrans*). We likewise found, among these animals, a brown race, descended from European pointers, hence the genuine bark of the dog is more frequently heard here, whereas among the western nations they only howl. The Indian dogs are worked very hard, have hard blows, and hard fare; in fact, they are treated just as this fine animal is treated among the Esquimaux.
